The present sequence is one of 3351 sequences in a library of human polymucleotides. The library is used to detect differentially expressed genes correlated with a cancerous state of a mammalian cell and can detect colon, prostate, breast and lung cancer. The library can be used to produce probes for detection of mRNA and to produce additional copies to produce probes for detection of transcription levels. Ribbozymes or antisense oligonucleotides can be used for chromosome mapping of the polymucleotides. The probes can be used for chromosome mapping of the polymucleotides and for detection of transcription levels. Ribbozymes or antisense oligonucleotides can be generated. The polymucleotides and their gene products are used as genetic or biochemical markers (e.g. in blood or tissues) that will detect the earliest changes along the carcinogenesis pathway and/or monitor the efficacy of therapies and preventive interventions. The polymucleotides, polypeptides and preventive them can be used in pharmaceutical compositions to treat the cancers and proliferative disorders such as neoplasia,

The invention relates to a substantially purified nucleic acid molecule encoding a nitrite reductase of SEQ ID NO. 11926. Further disclosed is a plant by construct for expression of a nitrite reductase gene in a plant cell comprising the recombinant DNA construct. The nucleic acid is useful for determining gene expression, identifying mutations in a gene of interest, and for constructing mutations in a gene of interest in records for SEQ IDs 1-1849 represent a set of 1849 contig and singleton sequences comprising coding sequences, but replication elements, promoters and other regulatory elements from the genome of the bacterium Maycoccous xanthus. Note: The sequence data for this patent did not form part of the printed specification, but was

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1252 AACTCAGGCTGTCCACATCCGCGTTCACCGTGGTGCCCGACGCGCTGGGCACCACCACCACT 1193
                                                                                                                                                                                                                                                                                                                                          The invention relates to a substantially purified nucleic acid molecule encoding a nitrite reductase of SEQ ID NO. 11926. Further disclosed is a recombinant DNA construct for expression of a nitrite reductase gene in a plant cell, and a plant cell comprising the recombinant DNA construct. The nucleic acid is useful for determining gene expression, identifying mutations in a gene of interest, and for constructing mutations in a gene of interest, and for constructing mutations in a gene of interest sequence given in records for SEQ IDS 1850-9691 represent a set of about 7842 genes or partial genes from the genome of the bacterium Mxyococcus xanthus. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AlaThrProMetLeuSerSerLysAlaSerLeuCysIleProThr------- 140

The present invention describes DNAs encoding hair keratin-associated proteins (KAP) of human origin, which bind to hair keratin. Also choteins (KAP) of human origin, which bind to hair keratin. Also described: (1) DNA encoding KAPs of mouse origin; (2) proteins encoded by the human and mouse DNA, and their partial peptides, and proteins derived from them by addition, deletion and/or substitution of one or more amino acid residues; (3) DNA hybridising to the DNA encoding KAP; (4) peptides (5 acid residues; (3) DNA hybridising to the DNA encoding KAP; (4) peptides (6) accepted and peptides; (7) recombinant proteins and peptides; (8) expression vectors containing the DNA encoding KAP; (9) host cells transformed by these vectors; (10) non-human animals which these antibodies; (8) expression vectors containing the DNA encoding KAP; (9) host cells transformed by these vectors; (10) non-human animals which care knockout animals for KAP or which overexpress KAP; (11) screening substances promoting or inhibiting the binding of KAP; composing using KAP or promoting or inhibiting the expression of KAP; composing using KAP or their partial peptides or cells expression vectors for them; (12) compositions containing these compositions containing these compositions containing these compositions for them; or host compositions (such as hair and beard growth improvers, hair colourants or growth promoters. The KAPs are useful as active ingredients in toiletry compositions (such as hair and beard growth improvers, hair colourants or growth promoters. The KAPs are useful as active ingredients in toiletry compositions (such as hair and beard growth improvers, hair colourants and hair invention.

Compositions or has been are located on chromosome 21, more exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DNAs encoding 39 Keratin-associated proteins localized on human chromosome 21, useful for screening binding and expression modifiers and as cosmetic and therapeutic agents for hair disorders.
                                                                                                                                                                                                                                                                                                                                                     gene;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence codes for an antigenic protein which binds with an antibody directed against an antigenic protein of avian coccidia, (esp. a protein of E.tenella sporozoite). It may be used for immunising birds against avian coccidiosis. The specification also includes a generic version of this sequence to cover all the degenerate codons coding for a protein having the amino acid sequence of AAP60577. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             41
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ProHisGlnAlaAlaAlaProValAspGlnThrProArgThrLeuAlaThrMetGlyGln

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                It encodes two antigenic proteins (AP) which bind with a monoclonal antibody (MAb) or polyvalent Ab directed against an AP of avian coccidia. (8X5401 is claimed in claim 1, and GX2564 is claimed in claim 2. Also new are an expression vector contg. the cloned gene, host cells transformed with the vector, and AP encoded by the cloned gene. The transformed cells are used in a vaccine to immunise birds against avian coccidiosis. By labelling the peptides, they can be used as a type-specific probe. The AP may also be used in an assay to detect Ab against the coccidia. The Abs are used to identify transformed cells contg. the DNA. (Updated on 25-MAR -2003 to correct PA field.)

                                                                                                                                                             8
                                                                                                                                                                                            g
                                                                                                                                                                                                                                                                       CDNA encoding the GX5401 antigen to identify clones encoding extensions of the GX5401 coding sequence. Several plaques reactive with the CDNA were identified. DNA from clone number 533 was sequenced. This analysis showed that the coding sequence in this clone overlaps with the GX5401 coding sequence and extends that sequence toward the N-terminal coding region. Analysis of the new sequence together with the GX5401 antigen coding sequence reveals an open reading frame encoding an Elmeria protein coding sequence reveals an open reading frame encoding an Elmeria protein coding sequence and extends that sequence for protein reading frame encoding a potential signal sequence for protein secretion. The coding sequence for this antigenic protein is given in AAN93324. Also new are an expression vector contg. the cloned gene, host cells transformed with the vector, and AP encoded by the cloned gene. The transformed cells are used in a vaccine to immunise birds against avian coccidiosis. By labelling the peptides, they can be used as a type-specific probe. The AP may also be used in an assay to detect Ab against the coccidia. The Abs are used to indentify transformed cells contg. the DNA. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       6189
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              6129
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              5068 GCTCCTCCAGCACCTGCCCCCCCTCTTCTCCCGGCAGCTCCTCAGCATTGCCGCCAGAG 6009

The present invention describes a nucleic acid (I) comprising a sequence encoding a 250 kDa polypeptide from Sporozoites/Merozoites of Eimeria maxima or its homologue or complement. Also described: (1) a vector comprising the nucleic acid; (2) a host cell comprising the vector; (3) a plasmid comprising the nucleic acid; (4) a transformed cell comprising to plasmid comprising the nucleic acid; (6) a transformed cell comprising or the nucleic acid; (5) producing a recombinant E. tenella, E. acervulina, c. E. necatrix, E. pracox; E. maxima, E. mitis or E. brunetti or a necorganism expressing an immunologically cross-reactive antigen; (8) immunising a subject against infection by Eimeria, or a microorganism expressing an immunologically cross-reactive antigen; (9) conferring upon capturessing an immunologically cross-reactive antigen; (9) conferring upon a newborn subject of an avian species maternal immunity against infection by Eimeria; (10) a fertilised egg from an avian species having an air sac, where the air sac is inoculated with the vaccine; and (11) reducing the output of Eimeria occytes in facces from a newborn subject of an avian species (1) has antiparasitic activity and can be used in a vaccine and in gene therapy. The nucleic acid is useful for preparing a vaccine against E. tenella, E. acervulina, E. necatrix, E. pracecox, E. maxima, E. mitis or E. brunetti infection. The present sequence, which is represents a 250 kDa antipen protein homologous DNA sequence.

Submitted (17-AUG-2004) MIPS, Ingolstaedter Landstr.1, D-85764
Neuherberg, GERMANY
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DRFZ); Email s.wiemann@dkfz-heidelberg.de;
sequenced by DKPZ (German Cancer Research Center,
Heidelberg/Germany) within the CDNA sequencing consortium of the
German Genome Project. This clone (DRFZ666B1777) is available at
the RZPD Deutsches Ressourcenzentrum fuer Genomforschung GmbH in
Berlin, Germany. Please contact RZPD for ordering:

Human Genome Sequences Mam. Genome. 12, 673-677 (2001)

Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)

RIKEN integrated sequence analysis (RISA) system-384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)

Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001) cDNA library was prepared and sequenced in Nouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN.

/note="Organ: lung, Vector: pExpress-1; Site_1: EcoRV;
Site_2: Not1; RNA obtained from pooled lung tissue from a mix of male and female animals at 8 wk old. Tissues were snap-frozen and kept at -80c for two days before RNA extraction and purification (Tri-reagent method). cDNA was primed using oligo-dT primer:
5-pGACTAGTTCTAGATCGCAGCGCCCCCC(T) 25-3' and cloned into the EcoRV/Not1 sites of pExpress-1. Size-selection >1.4kb resulted in an average insert size of 2.3 kb. This primary library is normalized (non-normalized primary library is NIH MGC_231) and was constructed by Express Genomics (FrederIck, MD). Note: this is a NIH_MGC_library."

/lang tumors with a Not I - oligo(dT) primer [5,
retraccharcheancheanted (dT) primer [5,
retraccharcheancheanted (dT) primer [5,
retraccharcheanted cDNA was ligated to Eco RI adaptors
(phamacia), digested with Not I and cloned into the Not
I and Eco RI sites of the modified pr773 vector. Library
went through one round of normalization, and was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ProproAlaLeulleValHisProProAlaGlyGlyMetAlaSerGlySerSerGlnPro 120
